POWERED BY INTELLIGENCE Ultimate Electronic Power Control

Enhanced performance and easy tuning are now managed by the Integrated Electronic Brain - IEB-Pro - implemented into K-array amplifiers. More than a traditional DSP, the built-in micro electronics driven by the integrated operating system osKar features expansive sound processing, offering complete user control over the system performance: Volumes, Signal Routing and Presets complete with a USB player. Directly manageable via Ethernet connectivity dedicated professional interface.

Powerful, all-in-one **3D modelling** software for all your advanced acoustic design needs. Supporting system designers and acoustic consultants to **simulate sound performance** across every application, offering efficient solutions for optimal loudspeaker configurations.

K-Monitor gives users on-premises access to K-array products on the **network**, for **amplifier monitoring**, troubleshooting and batch updates. Offline updates can be performed across multiple devices on a one-off basis or as a continuous monitoring app.

The advanced native **control system** app, for seamless K-array system management, integrates like a smart home control software. Providing complete command over any other device through **REST API** and customizable, it offers sophisticated audio management: vol. control, source selection, amplifier adjustment.

Ideal for quick installations or time-sensitive situations, K-Connect mobile app offers **fast amplifier access and setup** through a user-friendly interface. Available for Android and iOS, a simple QR code connects to the device's built-in Wi-Fi hotspot for tuning and control management.

Built into the device through K-array's proprietary OS (osKar), accessible from **any browser** (via mobile, tablet or PC), K-array's versatile Web App offers users access to **all system features** and full control over DSP functions, including signal routing, equalization, delay, pre-sets and operating system parameters.

Pure
Array
Technology

Pure Array Technology

Composed of closely-spaced, full-range sound sources, all our line array elements feature our innovative Pure Array Technology (PAT).

With no drivers dedicated to the high frequencies, no bass reflex or passive radiators dedicated to the low end, there are no crossover points and a perfect phase response is achieved in both the near and far fields.

All the sound sources in the array are identical and perfectly coupled producing a true line array with benefit of having the sound beam radiated by the column very wide on the horizontal plane and very narrow on the vertical plane.

The amount of energy sent towards the ceiling and the floor is then minimized greatly improving the intelligibility in highly reverberant venues like houses of worship and conference rooms.

Furthermore, such a focused sound beam is able to cover a long distance uniformly. The audience located in front of the array and at the back of the venue will experience the same tonal balance without the need of several delay lines. With no horns and no waveguides, PAT columns can be joined to create longer arrays.

The longer the array, the narrower the sound beam and the further the distance that can be covered uniformly.

Visually Discreet

For architectural reasons, a visually discreet audio system may be required to integrate seamlessly with the layout without compromising sound quality.

Weather Resistant

We utilize the most durable and resistant materials when developing our products to protect and conserve the system regardless of the elements, rendering a KGEAR installation reliable and long-lasting.

Lightweight

We created a portfolio complete with lightweight products that are easy to transportation and quick to setup optimizing logistics, space, labor costs and time.
