

elipson® | Chroma 200 RIAA BT

TURNTABLE

A belt-driven, Bluetooth-enabled manual turntable with an elegant design.

The Elipson Chroma 200 RIAA BT is a belt-driven manual turntable with an elegant design, with our latest technologies and can be connected directly to any amplifier, active speaker using RCA cable or in Bluetooth mode (aptX HD) with no loss of signal quality.

Assembled in France in our premises, the Elipson Chroma 200 RIAA BT offers the characteristics that contributed to the success of the Alpha models such as the OTT (Orbital Torsion Tonearm) tonearm in aluminum, its digital processing system of the motor rotation. It is distinguished by a new axis system for an even more precise rotation, an improved drive motor with optimized damping, a graduated counterweight, as well as by the addition of a cue control lever for your comfort of use.

Its integrated Phono-RIAA circuitry offers all the features of more expensive separate components with a choice of moving magnet and moving coil cartridge as well as a very high and faithful resolution of vinyl record signals.

It also offers a Bluetooth connection in high resolution 24 bits to enjoy any connected speaker and a USB type B port to digitize your vinyl records.
